

NEXCLAD COLORS

YOUR DESIGN IN MIND

Terracotta by its very nature is warm, earthy and inviting. Enhancing the natural qualities of terracotta by applying a glaze mixture prior to firing can create spectacular colors unable to be replicated on other building materials.

Creating the color of a terracotta tile is part science, and part art. A natural range of tones is a feature within any given color with the range of tones that arise from the manufacturing process being a very desirable feature of natural clay tile—imparting richness, character and a dimensional appearance to the building facade.

The high temperature firing process used at our manufacturing facility produces vibrant colors that do not fade, spall, effloresce, or significantly change over time. Our color glazes are kiln-fired at extreme temperatures during production, fusing the color into the tile and ensuring that the original tones and hues are retained for generations. This is why we include color in our industry leading 75-year material warranty.

We pride ourselves on our long history of color mastery and being recognized as an industry expert in glazed terracotta tile. With over 50 standard designer color blends and the ability to custom-match nearly any hue, the color possibilities are endless.
